

Mbaiammadji Sylvestre Banyo

Student Engineer — Software Engineering & Data Science

PROFILE

4th-year engineering student at ENSP Douala, passionate about data science and intelligent systems. With dual experience in Python data-oriented development and systems automation, I seek to deepen my Data Science skills in a demanding industrial environment. Certified by IBM in Introduction to Data Science, Harvard Leadership, and NASA Open Science, I design data pipelines, automate analytical processes and deliver actionable insights.

OBJECTIVE

Join a Data or Information Systems team to apply my skills in data analysis, Python development and digital solution design. Contribute to process optimization and intelligent data exploitation while consolidating my technical expertise in a stimulating professional environment.

PROFESSIONAL EXPERIENCE

Python Developer Intern — Data & Vision

Adjour Technology | Douala

- Facial recognition attendance system (Python, OpenCV)
- Automated tracking: storage, processing and analysis (SQLite)
- Real-time image processing — 80% reduction in processing time
- Technical documentation and system validation testing

Python Developer Intern — Network & Data

ENSP Laboratory | Douala

- Network device tracking and mapping application
- IP/MAC data collection and structured database storage
- Implementation with Python, Scapy and socket; visualization dashboards
- Results presentation with improvement recommendations

EDUCATION

Engineering Degree — Computer Engineering & Telecom (4th year) — 2024–present

École Nationale Supérieure Polytechnique (ENSP) — Douala

DUT — Computer Engineering & Telecom — 2022–2024

Institut Universitaire de Technologie (IUT) — Douala

PROFESSIONAL CERTIFICATIONS

- ✓ IBM Introduction to Data Science — edX / IBM
- ✓ Agile Project Management (Professional) — University of Maryland
- ✓ Exercising Leadership — Harvard University — edX
- ✓ Fundamentals of Digital Marketing — Google
- ✓ NASA Open Science 101 — NASA

KEY PROJECTS

Facial Recognition Attendance System

Python · OpenCV · SQLite · Image Processing

- Full pipeline: capture, preprocessing and real-time biometric analysis
- Face encoding, structured storage, automated report generation

Network Mapping & Device Analysis

Python · Scapy · Socket · SQLite · Visualization

- Automated IP/MAC scan and structured DB storage
- Device monitoring dashboard with anomaly detection
